Date Rec'd

Catalogued 6 17

Accession Number 1512

We are proud to be the first in this area to feature the induction method of casting, a method that achieves the highest physical properties for the alloy used, resulting in more ductile castings, thus, adjustability and resiliency. The induction

DUCTION Casting*.

method means complete uniformity throughout casting, no porosity, stronger and denser castings. Physical properties of GOLD or CHROME alloys after induction casting are increased a minimum of 10% or more over the old "torch" melting methods. You are also assured, of a minimum of 10% increase in accuracy of fit of GOLD and CHROME castings, GOLD INLAYS and BRIDGEWORK...

You are assured too, of consistent results.

*Induction Casting is melting to casting consistency of chrome or gold through creation of magnetic fields in the metal body by radio waves . . . Actually a "molecular stirring" of the metal.

Why Nobilium ?

Because Nobilium, the Aristocrat
of Chromium Alloys, provides every possible
quality for your patients. Nobilium restorations
satisfy COMPLETELY . . . leave nothing to be
desired. For a quick check of the many qualities
you get when you specify this increasingly
popular alloy refer to the check list.

NOBILIUM PRODUCTS, INC.

125 North Wabash Avenue, Chicago 2, III. 914 Walnut Street, Philadelphia 7, Pa,

LIGHTNESS

Nobilium's extremely low specific gravity makes even the largest partials light in weight and more comfortable.

STRENGTH Nobilium's great strength makes it possible to cast thin bars, clasps, saddles and palates.

RESILIENCY Nobilium's unusual resiliency assures the superb functioning of clasps.

CLASP ADJUSTABILITY Nobilium clasps may be adjusted without fear of breakage.

PRECISION Accuracy is assured through the use of Nobilium and Nobilium materials and techniques.

DENSITY Nobilium's hardness prevents abrasion or indentation.

ELECTROLYTIC POLISHING This Nobilium process gives an exceedingly high polish to ALL of the hard-to-reach surfaces including inner side of clasps, difficult undercuts, detail of rugae and boxings for teeth.

LUSTRE Nobilium will not tarnish, nor discolor. Its mirror-like surface reflects the color of live tissue.

CLEANLINESS Nobilium is easy to clean and keep clean.

REPAIRS Nobilium can be repaired without a line of demarcation, clasps added as desired.

COMFORT Nobilium is completely compatible with tissue and its smoothness prevents irritation:

LOW COST While Nobilium is known to dentistry as "The Aristocrat of Chromium Alloys" Nobilium restorations are still inexpensive.

In CHICAGO these laboratories are ready to serve you

American Dental Co. 5 S. Wabash Ave.

Dahl Dental Laboratory 4105 West Madison St.

Getz Bros. Dental Laboratory 2952 Milwaukee Ave.

Lester Dental Laboratory 32 N. State St.

Professional Arts Laboratory 1633 W. 63rd St.

A. J. Schroeder Dental Laboratory 4032 Milwaukee Ave.

Scientific Dental Laboratory 31 N. State St.

Silvert Dental Laboratory 3933 N. Broadway Ave.

Wall Dental Laboratory 3959 Ogden Ave.

... Nobilium is used exclusively by one of America's greatest Midwestern Universities. Extensive investigation and exhaustive tests in every conceivable type of partial restoration have evidenced the wiseness of this selection.

Regular Monthly Meeting-

CHICAGO DENTAL SOCIETY

8 P.M. North Ballroom The Conrad Hilton

TUESDAY, APRIL 15th, 1952

The essayist is Charles H. M. Williams, D.D.S., B.Sc.
Associate Professor of Periodontology
at the University of Toronto School of
Dentistry.

His title is: PERIODONTAL POCKET THERAPY

The essayist is chairman of the Journal Committee and chairman of the Advisory Committee both of the Canadian Dental Association and a member of the American Academy of Periodontology. Reports of his work in the rationalization of periodontal pocket therapy have appeared in the Journal of the American Academy of Periodontology and the Journal of the Canadian Dental Association. He has appeared on former Midwinter Meeting programs.

The Fortnightly REVIEW

THE CHICAGO DENTAL SOCIETY

Jan. 2, 1952

Volume 23 . Number 1

Grievance Committee Arbitrates Many Cases

Denture Cases Occasion Most Grief

ne of the hardest-working and yet one of the most unheralded and unsung committees of the Chicago Dental Society is the Grievance Committee. Properly speaking, it is a subcommittee, just one of the sections of the Public and Professional Relations Committee, but its members are constantly embroiled in an effort to smooth out the differences of opinion that arise between our members and their patients. A better name for the committee might be the Conciliation Committee for the conciliation of controversy is the group's reason for being. A review of the committee's voluminous files at the central office is a revealing study of dentist-patient relationships and one that any practitioner would derive benefit from. Several dental schools have used the committee's files (with all names carefully deleted, of course) as texts for courses in patient and practice management. But there are general lessons to be drawn from the committee's experience that can sooner or later concern any one of us in practice.

Chief of these is that within all promises of denture comfort there lies the germ of complaint. The great bulk of complaints that come to the committee are on some phase of full denture prosthesis and the basic trouble is, over and over again, that the dentist painted entirely too optimistic a picture for the patient of the ultimate fit, and comfort and appearance of the dentures. Then, too, we tend to be optimistic about the effort required on the part of the patient to become accustomed to the wearing of the new dentures. In short, we don't prepare the patient for the experience he or she may encounter and, as a result, when the fit is anything less than perfectly comfortable and the appearance is anything less than gorgeous another case for the Grievance Committee is in the making. And here is another point in the march of events at which some of us fail: If we would bear with the patient, explain the situation, most of the time the troubled waters can be smoothed but the pattern of complaints reveals that much too often exactly the opposite treatment is afforded. Whereupon the patient takes strident umbrage and proceeds under forced draft to the dental society office to make the welkin ring with an account of alleged abuse. Patients more remote in situation make the telephone ring instead but the end result is the same.

In common with most other large

Minutes of the Regular Meeting Chicago Dental Society

Conrad Hilton Hotel December 18, 1951

The meeting was called to order by President Baumann at 8:00 p.m.
Dr. Hax moved and Dr. Solfronk seconded to entertain a motion to dispense with the reading of the minutes of the November meeting.

Dr. Hax moved and Dr. Kreiner seconded to entertain a motion to approve the minutes of the November meeting as published in the December 15 issue of FORT-NIGHTLY REVIEW.

Reports of Boards and standing committees—none.

Reports of special committees-

Dr. Rawson of the North Side Branch asked permission to give a report on the Federal Health Insurance Committee in the absence of Dr. Zielinski, the Chairman. Permission was granted. At the end of his report Dr. Rawson asked permission to have five minutes allotted to him to discuss this report at the January meeting. Permission was granted.

Unfinished business-none.

New business-

President Baumann requested the Secretary to read the resolution to amend the By-Laws of the Chicago Dental Society that had been approved by the Board of Directors.

"RESOLVED, that the by-laws of the Society be amended as follows:

(1) By inserting after Article XVII an article as follows:

'ARTICLE XVIII

Indemnification of Officers and Directors.

The Society shall indemnify and save harmless each officer and director now or hereafter serving the Society from and against all claims and liabilities to which he may be at any time subject by reason of his being or having been an officer or director of the Society or by reason of his alleged acts or omissions as an officer or director of the Society, and shall reimburse each officer or director for all legal and other expenses reasonably incurred by him in connection with defending against any such claims or liabilities, provided, however, that no officer or director shall be indemnified against any claim or liability proved to have arisen out of his own negligence or wilful misconduct, or be reimbursed for any expenses incurred in defending himself against the same.'

(2) By renumbering present Articles XVIII to XXV both inclusive as Articles XIX to XXVI both inclusive."

In the absence of Dr. Rusch, Chairman of the Monthly Program Committee, Dr. Baumann introduced Dr. George Hax, Vice-Chairman, who in turn introduced the speaker of the evening, Dr. Gilbert H. Marquardt. Dr. Marquardt gave a very interesting and helpful lecture on the subject of "The Hazards of Dentistry."

At the conclusion of Dr. Marquardt's paper Dr. Baumann thanked Dr. Marquardt and wished the members of the Society a very Merry Christmas and a very healthy and Happy New Year.

Meeting adjourned at 9:45 p.m.

Respectfully submitted, S. R. Kleiman, Secretary.

NEWS AND ANNOUNCEMENTS

HAPPY NEW YEAR!

The officers and directors of the Chicago Dental Society, together with the editorial and central office staff, extend to all readers their wish for a Happy New Year.

TESTIMONIAL DINNER FOR DR. BAUMANN PLANNED

Dr. Edwin W. Baumann, President of the Chicago Dental Society, will be honored at a testimonial dinner to be given by the members of the Ralph C. Cooley Study Club at the Lake Shore Athletic Club on the evening of Tuesday, February fifth, during the Midwinter Meeting.

The Ralph C. Cooley Study Club extends an invitation to their friends to participate with them on this occasion. Tickets are available from Dr. L. E. Hedges, 6750 Northwest Highway, Chicago 31, Illinois.

ALPHA OMEGA DINNER

Alpha Omega Fraternity will hold its annual Pre-Midwinter Meeting dinner on February 3 at the Congress Hotel. Dinner will be followed by entertainment and dancing. Chairman for this affair is Dr. Stanley Sherman, 4010 West Madison Street.

Alpha Omega will have its usual headquarters room in 537A at the Conrad Hilton.

WATCH YOUR POCKETBOOKS

One of our members had a fast one pulled on him the other day and it could happen to you. This woman came into his office, said she had two teeth that were giving her a lot of pain. She took her place in the chair and the dentist started to examine the teeth. He touched one and the women gave a violent start of pain and grabbed him around the hips. Then she apologized for her lack of self-control and the dentist continued with the examination. Just then the telephone rang and he answered it, talked for a moment and returned to the chair. He examined the second tooth and the woman repeated the performance. Examination showed that immediate extraction was the treatment of choice, an appointment for this operation was made and the woman departed.

Shortly afterward the dentist had occasion to open his wallet, kept in a hip pocket. His wallet was there but \$680 was missing that he had counted that same morning. The woman did not keep the appointment for the extractions. The dentist deduced that she took the wallet on the first jump and returned it on the second.

The woman is described as fat, weighing about 175 pounds, sandy-haired and fast-talking and of a generally nondescript appearance. The teeth involved are (a) the first bicuspid on the upper left and (b) a lone molar on the upper left. There is a wide empty gap between the two teeth.

En garde, mes amis!

PERIODONTIA COURSE AFTER MIDWINTER MEETING

Treatment of periodontal disease by the dentist in general practice will be discussed in an all-day course to be offered by the University of Illinois College of Dentistry on Thursday, Feb. 7, following the annual Midwinter Meeting of the Chicago Dental Society.

Four outstanding practitioners from (Continued on page 50)

Regular Monthly Meeting— CHICAGO DENTAL SOCIETY

8 P. M. North Ballroom The Conrad Hilton

TUESDAY, JANUARY 15th, 1952

The essayist is DR. JAMES R. CAMERON, Professor of Oral Surgery and Head of the Department at the Temple University School of Dentistry.

His title is THE EXPANDING FIELD OF ORAL SURGERY.

The essayist has constructed his presentation to appeal to an audience made up largely of general practitioners and it will deal with the interrelations of the role of the specialist and the man in the general field.

"Your efforts to get to the meeting room on time and help start our meetings on the dot are most deeply appreciated"—

Edwin W. Baumann, President

Preliminary Program

THE 87th MIDWINTER MEETING of the CHICAGO DENTAL SOCIETY February 3-7, 1952 CONRAD HILTON HOTEL

OFFICERS, DIRECTORS AND MIDWINTER MEETING COMMITTEE CHAIRMEN

General Arrangements Committee	Robert P. Janitschke

Invitation

YOU are cordially invited to attend the 87th Midwinter Meeting of the Chicago Dental Society. Registration starts at ten o'clock on the morning of Sunday, February third; the technical exhibits open at one o'clock on that afternoon and the program of essays, limited attendance clinics, table clinics, scientific exhibits, health and educational exhibits, motion pictures and entertainment that is set forth in the succeeding pages starts on Monday morning, February fourth.

We are completely sincere when we say that our officers, chairmen and committeemen have made every possible effort to make this a fine meeting. Not one single thing, either in our planning or in the execution of those plans, has been left undone that would improve the program or increase its value to those who are there. We hope you will attend.

Edwin W. Baumann, *President* Samuel R. Kleiman, *Secretary*

REGISTRATION AND CREDENTIALS

LEROY E. HEDGES, Chairman

WAYNE L. FISHER, Vice-Chairman

WHO MAY REGISTER

- All regular active, life, retired or honorary members in good standing of the Chicago Dental Society for the year 1952 (dues, if not paid previously, may be paid at the Registration Desk);
- All associate members in good standing of the Chicago Dental Society for the year 1952;
- 3. All members of the Dental Corps of the United States Army, Navy, Public Health Service, or Veterans Administration who are members in good standing of the American Dental Association:
- 4. Other members of the dental profession who are members in good standing of the American Dental Association or a recognized foreign dental society upon payment of a registration fee of \$3.00. Payment of this fee will entitle the registrant to all privileges of the meeting;
- 5. All applicants for membership in the American Dental Association, provided a written statement is presented from the Secretary of the local society in which his application is pending;
- 6. All dental assistants and dental hygienists who are members in good standing of their respective national associations, or who are employed by a member in good standing of the American Dental Association, or a recognized foreign dental society, provided evidence to that effect is presented in writing;
- 7. Laboratory owners and technicians upon presentation of evidence of membership in good standing of a recognized state or national laboratory association, or upon written endorsement of a member of the American Dental Association:
- Dealers' and manufacturers' representatives upon presentation of evidence of membership in good standing of a recognized national dealers' or manufacturers' association;
- Senior and junior students of recognized dental schools and colleges upon presentation of proper identification;
- 10. Members of the family of an American Dental Association member upon written endorsement;
- 11. Lay persons upon filing an approved application form, endorsed by an American Dental Association member.

AFFILIATED GROUPS

The organizations listed below will hold functions during the period of the meeting. Those designated with an asterisk will have headquarters rooms.

PRIZE ESSAY CONTEST

The Eleventh Annual Prize Essay Competition sponsored by the Chicago Dental Society in connection with the 87th Midwinter Meeting of the Society was won by Drs. Reidar F. Sognnaes and James H. Shaw of Boston. The essay will be presented at a general session taking place in Private Dining Room Number Two of the Conrad Hilton Hotel on Wednesday morning, February sixth, at eleven o'clock.

The title of the essay is "Salivary and Pulpal Contributions to the Radiophosphorus Uptake in the Enamel and Dentin of Rhesus Monkeys."

The senior author, Dr. Reidar F. Sognnaes, will read the essay. He is Associate Professor of Dental Medicine at the Harvard School of Dental Medicine, a consultant at the Forsyth Dental Infirmary and a consultant at the National Institute of Health, Dental Division, Bethesda, Maryland. He holds a degree of L.D.S. from the Norway Dental School at Oslo, a Ph.D. from the University of Rochester School of Medicine and Dentistry and a degree of D.M.D. from the Harvard University School of Medicine and Dentistry.

Dr. Lyle F. Aseltine, Chairman of the Program Committee of the Midwinter Meeting, will preside at this General Session. Dr. Edwin W. Baumann, President of the Chicago Dental Society, will present Doctor Sognnaes with the prize award on behalf of the Society.

Memo to dentists:

During your stay in Chicago you are cordially invited to visit the Central Office headquarters of the American Dental Association at 222 East Superior Street.

The Central Office is open daily from 8:30 a.m. until 5 p.m. Staff members will be pleased to escort you through the Office at your convenience.

Harold Hillenbrand, D.D.S. Secretary

LIMITED ATTENDANCE CLINICS

ROBERT F. TUCK, Chairman

GRAHAM O. DAVIES, Vice-Chairman

The Limited Attendance Clinic program will be presented Monday and Tuesday mornings and Monday, Tuesday and Wednesday afternoons, February 4, 5 and 6. Each clinic will be of one and one-half hours duration; one session will be presented each morning and two sessions each afternoon.

There will be a charge of \$2.00 per clinic enrollment payable at the time of application. This charge is made to limit applicants to those whose attendance is definite and to partially defray the cost of this program.

It is not necessary to fill out any formal application blank to enroll in one or more clinics. Simply drop a note to the Chicago Dental Society, 30 N. Michigan Ave., specifying the clinic or clinics desired, giving as many selections as possible, both as to choice of clinics and choice of dates. Please refer to the program for the day or days each clinic is to be presented. All applications must be accompanied by remittance of \$2.00 for each clinic for which enrollment is sought. Those desiring to enroll are urged to apply early and to be as brief as is consistent with a full explanation. Applications will be time stamped and considered in the order of receipt. Upon assignment, applicant will be sent cards of admission. Fees paid are not subject to refund except upon cancellation of clinics by the Society.

Applications received on and after January 26, will receive the same consideration as all applications received prior to that date except that, due to limitations of time, applications for clinics in which there are no vacancies will be cancelled automatically. No cards of admission will be mailed after January 26. Cards of admission for clinics in which there are vacancies will be held at the committee headquarters at the Conrad Hilton Hotel for delivery, upon demand, to the applicant. The committee cannot engage in correspondence with applicants whose applications are not in the committee's hands before January 26.

CHILDREN'S DENTISTRY

1. Fractures of the Anterior Teeth of Children

Presented on Monday at 10:30 a.m. in Room 521 Presented on Monday at 1:30 and 3:30 p.m. in Room 521

(1) Roentgenograms and diagnosis; (2) Treatment plans and procedures for fractures, (a) Fractures not involving the pulp and (b) fractures involving the pulp; (3) Treatment of the pulps, (a) Deciduous and (b) permanent; (4) Steps in restoring lost portion of teeth, (a) Class I, (b) Class II, (c) Class III fractures; (5) Treatment of traumatic displacement of anterior teeth; (6) Aesthetic considerations. Models and Kodachrome slides will augment the discussion.

2. Fixed and Removable Prosthetics for Children

> Presented on Monday and Tuesday at 10:30 a.m. in Room 545 Presented on Tuesday at 1:30 and 3:30 p.m. in Room 545

(1) Why fixed and removable appliances are necessary for children; (2) Where fixed and removable appliances are necessary for children; (3) When fixed and removable appliances are necessary for children; (4) How fixed and removable appliances are constructed for children. The presentation will be accompanied by colored illustrations of the above points as well as models.

3. The Pre-school Dental Patient

ELSIE GERLACH......CHICAGO

Presented on Monday and Tuesday at 1:30 and 3:30 in Room 507

Many general practitioners find the small child extremely difficult to handle because of the many factors involved in treating the dental conditions present. The methods of handling such patients and their parents will be reviewed. Fillings, root canal therapy for deciduous teeth, space maintainers and methods to prevent thumb sucking habits will be described.

4. The Dentist's Responsibility to the Child Patient

GORDON H. ROVELSTAD......ELGIN, ILLINOIS

Presented on Tuesday at 10:30 a.m. in Room 512 Presented on Wednesday at 1:30 and 3:30 p.m. in Room 512

This presentation will review the importance of good dental health for the child patient during the developmental years and some of the problems involved. Dental infections and irregularities caused by neglect during the early years will be discussed and illustrated. Methods for the prevention and control of the caries problem will be presented, together with a planned treatment program that can be a vital part of the general practice.

OPERATIVE DENTISTRY

5. Direct Wax Pattern Technic for Cast Gold Inlays

> Presented on Monday at 10:30 a.m. in Room 512 Presented on Monday at 1:30 and 3:30 p.m. in Room 512

A discussion of the indications and relative merits of the three principal technics for making wax patterns; together with a presentation of a simple, efficient method for making direct wax patterns for all types of cast gold inlays with due consideration of the physical properties of inlay waxes.

6. Diagnosis-The Key to Practice Building (Illustrated)

ARTHUR ELFENBAUM AND SEYMOUR H. YALE......CHICAGO

Presented on Monday at 10:30 a.m. in Room 505 Presented on Tuesday at 1:30 and 3:30 p.m. in Room 505

Diagnosis in dentistry has not attained the esteem that it is rightfully given in medicine. Diagnosis is not treatment planning. Actually it is the broad foundation upon which all dental practice is built, and without which no practice is secure or lasting. The lecture will discuss the basic diagnostic principles prevailing in the various branches of dentistry. Colored slides of practical case histories will be shown on the screen. Discussion will be invited.

Greater Efficiency in Cavity Preparation Through the Use of Special High Speed Technics for Diamond Instruments and Carbide Burs

Presented on Tuesday and Wednesday at 1:30 and 3:30 p.m. in Room 546

This clinic will present special technics for the use of diamond instruments and carbide burs in cavity preparation. The advantages of high speed and the continuous use of a coolant and lubricating stream will be discussed, also the subject of instrument design will be treated. Proper cleaning and sterilizing procedures will be presented whereby the length of life of these instruments may be increased.

8. Eliminating Guesswork in Making Small Castings

Presented on Monday and Tuesday at 2:30 p.m. in Room 556 (2½ hours)
Presented on Wednesday at 2:30 p.m. in Room 550A (2½ hours)

Complete fabrication accompanied by colored motion picture following the steps of this procedure, and, in addition, the new concept of casting by vacuum.

9. The Manipulation of Silver Amalgam

JOHN H. MOSTELLER......MOBILE, ALABAMA

Presented on Monday and Tuesday at 1:30 and 3:30 p.m. in Room 505A

This presentation shall include a discussion of the following: the paramount advantages of a fine cut silver alloy, newer concepts of the mixing of silver alloy and mercury, an evaluation of condensing technics, fabrication of an amalgam restoration including the matrix; carving, finishing, and polishing of the restoration and, as well, some economic considerations in amalgam restorative service.

10. Acrylic Restorations-Operative Non-Pressure Procedure

FRANK H. NEALON.....LAKEWOOD, OHIO

Presented on Tuesday and Wednesday at 1:30 and 3:30 p.m. in Room 513

Using a non-pressure procedure in the placement of acrylic restorations, the clinician presents a unique clinic. His method takes full advantage of the physical and chemical properties of the material. The procedure compensates the volumetric loss to infinity. The prepared cavity is the site of conception and termination of polymerization. The clinician is prepared to substantiate his method by original volumetric and comparative studies.

CROWN AND BRIDGE

Direct Crown and Bridge. Indirect-Direct Three-Quarter Crown Technic, Crown and Bridge Repair Technic

C. VERNE LEHMAN.....CEDAR RAPIDS, IOWA

Presented on Tuesday at 1:45 and 3:45 p.m. in Room 512 Presented on Wednesday at 1:45 and 3:45 p.m. in Room 556

Colored slides showing direct crown and bridge technic, indirect-direct threequarter crown technic and simple crown and bridge repair technic. If time permits, table demonstration will be given.

12. Two Visit Fixed Bridge Insertions Using the Hydrocolloid Technic

cresented on Monday and Wednesday at 1:45 and 3:45 p.m. in Room 545

In metropolitan areas, especially, the time factor is an important consideration in complete and better dentistry for the transient patient. The hydrocolloid technic in combination with a durable die enables the operator to produce extensive, beautiful restorations of great accuracy in his laboratory within a period of two visits.

13. Anterior Fixed Bridgework

ROBERT G. PINKERTON......CHICAGO

Presented on Tuesday at 10:30 a.m. in Room 553 Presented on Tuesday at 1:45 and 3:45 p.m. in Room 553

Presenting easy, accurate technics for obtaining various types of abutment and bridge impressions. Preparation of esthetic and durable pontics, followed by technic employed in a practical case. Kodachrome slides and demonstration models.

14. Dental Engineering Applied to Inlay and Fixed Bridge Fabrication

EDWIN S. SMYD. DETROIT, MICHIGAN

Presented on Tuesday and Wednesday at 1:43 and 3:45 p.m. in Room 516

The engineering principles important to inlay and bridge construction will be discussed and demonstrated by Kodachrome slides and a short movie. A rationale of cavity preparation stems from this study as well as a critique for inlay and bridge fabrication. If time permits, the practical application of the study will be illustrated by slides of armamentaria, and chairside and laboratory procedures for the fabrication of bridge abutments.

15. Dentures-Partial-Full Upper-Full Lower

> Presented on Monday at 1:45 and 3:45 p.m. in Room 546 Presented on Tuesday at 1:45 and 3:45 p.m. in Room 523

We will discuss the underlying principles of partial denture design demonstrating our original master casts of difficult practical cases now being worn. We will discuss any practical partial denture master casts brought by the audience for study. A discussion of a full modified roofless denture establishing ample retention and adhesion. The method will be demonstrated upon any full upper master cast brought into the clinic. The development of a lower full denture with functional adhesion without movable tissues being distorted or displaced.

PERIODONTIA

16. Practical Procedures in Functional Treatment

> Presented on Tuesday at 1:45 and 3:45 p.m. in Room 561 Presented on Wednesday at 1:45 and 3:45 in Room 534

A demonstration of the use of conventional methods and equipment, in treatment of the basic functional requirements of the mouth, by a new approach to the mystery and complications which surround this vitally important phase of dental treatment.

17. The "Know How" of Preventive Care

Presented on Tuesday and Wednesday at 1:45 and 3:45 p.m. in Room 524A

The periodontal disease workshop recently held at the University of Michigan recommended procedures that dentists should follow for the prevention of periodontal disease. The practical application of these suggestions emphasizes a new concept—the maintenance of oral health by "preventive care." This modern concept of "preventive care" eliminates the differentiation between periodontal patients, and other types of patients, because preventive care is a dental health service which is a basic part of the general practice of dentistry. This clinic is designed to demonstrate by means of Kodachrome slides, charts, radiographs and models the following partial list of subjects: (1) Controls for the patient and the practice, (2) Systemic relation, (3) Recall preventive treatments, (4) Functional analysis and correction of occlusion based on "stress coat" technics, (5) Suggestions for instituting preventive care.

18. The Handling of a Periodontia Patient

RAYMOND E. JOHNSON..... MINNESOTA

Presented on Monday at 1:45 and 3:45 p.m. in Room 3:6 Presented on Wednesday at 1:45 and 3:45 p.m. in Room 36:1

Routine office procedure. Diagnosis: (1) Clinical examination, gingiva (sulcus and periodontal pockets), mobility of the teeth, occlusion; (2) Radiographic examination, peridental membrane, bone loss; (3) Medical history, past illness, present complaint, etc., dietary findings and recommendations; (4) Treatment procedure, instrumentation, sub-gingival curettage, surgical methods, postoperative care and instructions in daily mouth care. After a careful diagnosis follows a frank discussion with the patient concerning the extent of the disease, your plan of treatment, its prognosis and the economic problems involved. These factors should be discussed in detail to avoid future misunderstandings.

19. Gingivitis-Its Differential Diagnosis and Treatment

DONALD A. KERR.....ANN ARBOR, MICHIGAN

Presented on Monday at 1:45 and 3:45 p.m., in Room 533 Presented on Wednesday at 1:45 and 3:45 p.m. in Room 505A

The protean character of gingivitis makes differential diagnosis important in the selection of a successful treatment. It is therefore essential that the various types of gingival disease which are produced by a variety of factors such as hormonal dysfunction, drug reactions, infections, systemic disease, neoplastic disease, and hereditary factors be recognized clinically so that the best therapeutic procedures can be selected for the treatment of each case. Proper treatment of gingival disease is important because of its high incidence and the frequency with which it initiates other forms of periodontal disease. The various types of gingivitis will be demonstrated by Kodachrome slides.

ENDODONTIA

20. Simplifying Endodontia for the General Practitioner

SYLVESTER J. BOURGEOIS NEW ORLEANS, LOUISIANA

Presented on Monday at 1:45 and 3:45 p.m. in Room 513A Presented on Tuesday at 1:45 and 3:45 p.m. in Room 512A

To do good root canal work, one must believe in it, eliminate the guess work, and develop a simple, accurate technic. Clinician will discuss and illustrate with slides and table clinic: (1) philosophy of endodontic treatments; (2) with a little help nature can do wonders; (3) why failures; (4) rapid sterilization of instruments; (5) access to canals; (6) precautionary measures to avoid discoloration; (7) irrigation; (8) comparative effectiveness of various medicaments and antibiotics; (9) mechanical cleansing and filling of canal under accurate measurement control; methods and materials; (10) use of cultures; (11) construction of inexpensive incubator; (12) simple method of taking accurate x-rays regardless of position of patient.

21. Rapid Sterilization of Root Canals

LOUIS I. GROSSMAN......PHILADELPHIA, PENNSYLVANIA

Presented on Tuesday and Wednesday at 1:45 and 3:45 p.m. in Room 547

Infected root canals can be sterilized and filled in about the same time it takes to prepare a cavity, take an impression, and cement an inlay—in other words, about one and a half to two hours of chair time. This can be done by the use of a combination of well-chosen antibiotics designed to destroy all varieties of microorganisms likely to be present in an infected root canal. The formula for such a combination of antibiotics will be given and evidence based on more than 300 treated cases will be presented.

22. Practical Root Canal Therapy

LESTER E. KALK, VINCENT B. MILAS AND T. C. STARSHAK.......CHICAGO

Presented on Monday at 1:45 and 3:45 p.m. in Room 547

A rapid, time-saving technic of root canal therapy without benefit of surgery will be demonstrated. The clinic will cover a demonstration of all phases of saving teeth either with a vital exposed pulp or with a putrescent involvement. It is our aim to encourage more of the average practitioners to make the conservation of the tooth a routine practice in their offices.

23. Basic Principles Governing Successful Root Canal Therapy

> Presented on Monday at 10:30 a.m. in Room 509 Presented on Monday at 1:45 and 3:45 p.m. in Room 509

(1) The key to successful root canal therapy (a) selection of cases and surgical principles; (2) Contraindications for endodontic treatment (a) brief discussion of various conditions contraindicating endodontic treatment with illustrations; (3) Use of a rubber dam (a) why it is essential for endodontic treatment; (4) Sterilization (a) instruments, (b) rubber dam, (c) paper points and dressings; (5) Arrangements of instruments on tray for endodontic treatment; (6) Method of sealing medicaments; (7) Discussion of root canal instruments and manner in which used; (8) Measurement control of root canal; (9) Taking of cultures during endodontic treatment.

24. Endodontia

Presented on Monday at 1:45 and 3:45 p.m. in Room 509A

The following points will be discussed: (1) Indications for pulp canal treatment in deciduous and permanent teeth; (2) Use of antibiotics in pulp canal treatment; (3) Partial pulpectomy in deciduous and permanent teeth; (4) Silver point technic in filling root canals; (5) Pulp protection in near exposures; (6) Pulp capping.

ORAL SURGERY

25. Fundamental Oral Surgery Principles

LESLIE M. FITZ GERALD......DUBUQUE, IOWA

Presented on Tuesday and Wednesday at 1:30 and 3:30 p.m. in Room 513A

The discussion will include preoperative study, diagnosis, treatment planning, the handling of possible accidents and complications that may occur in office practice of oral surgery; methods of prevention and treatment, basic surgical principles, and postoperative treatment. Time for discussion of problems encountered in every day practice will be available.

26. The Removal of the Impacted Mandibular Third Molar

HOWARD E. GILLETTE.....AURORA, ILLINOIS

Presented on Monday at 10:30 a.m. in Room 513 Presented on Monday at 1:30 and 3:30 p.m. in Room 513

(1) Preoperative diagnosis (clinical and radiographic), (2) Operative technics, (3) Postoperative treatment—instruction and postoperative visits.

27. Oral Surgery for the General Practitioner

FRANK H. O'HALLORAN EVANSVILLE, INDIANA

Presented on Monday and Wednesday at 1:30 and 3:30 p.m. in Room 512A

This clinic will cover the experience every dentist encounters in the daily routine of removing teeth. Preoperative and postoperative care will be discussed and a technic will be given for the removal of each root fragment. Complications resulting from the removal of teeth will also be discussed.

28. Methods Used in the Practice of Minor Oral Surgery

WARREN R. SCHRAM.....CHICAGO

Presented on Monday at 10:30 a.m. in Room 524A Presented on Monday at 1:30 and 3:30 p.m. in Room 524A

Diagnosis and treatment planning. The use of appropriate drugs for premedication when this is indicated. Methods calculated to obtain profound anesthesia. Presentation of slides to show unusual pathology, and the methods of removal of difficult teeth and roots. Description of the method found most successful in closing an opening from the maxillary sinus into the mouth.

29. A Kodachrome Review of Your Oral Surgery Problems

VIGGO B. SORENSEN.....CHICAGO

Presented on Monday at 10:30 a.m. in Room 553 Presented on Wednesday at 1:30 and 3:30 p.m. in Room 553

This clinic will be a showing of slides of routine oral surgery procedures which the general practitioner can handle in his office. The material will cover apicoectomies, cysts, immediate dentures, alveolectomies, biopsies, and other dento-alveolar problems.

RADIOLOGY

Presented on Tuesday and Wednesday at 1:45 and 3:45 p.m. in Room 509A

The following questions will be answered: (1) Is my present machine obsolete? (2) What about the long cone technic? (3) Can I see more than abscess, granulomas, cyst and caries? (4) How can I discover more information that will save me time and money?

CLINICAL PHOTOGRAPHY

31. Clinical Photography

> Presented on Tuesday at 10:30 a.m. in Room 507A Presented on Tuesday at 1:45 and 3:45 p.m. in Room 507A

The demonstration will include: (1) Equipment and technic of making both black and white and colored pictures and slides of the dental patient; (2) Profile and front views of the face, detailed pictures of the mouth and teeth and an accurate method of making a profile template; (3) The application of this material in the practice of dentistry.

32. Clinical Photography for the Dentist

TOURO M. GRABER......CHICAGO

Presented on Monday at 10:30 a.m. in Room 507A Presented on Monday at 1:45 and 3:45 p.m. in Room 507A

Photography can be one of the most important adjuncts in patient education, in acquiring more adequate records, in assembling material for scientific papers, clinics, etc. To be of value to the busy dentist, however, the equipment and technic must be simple, efficient and standardized. The only variable should be the patient or appliance to be photographed. It is the purpose of this limited attendance clinic to present a number of types of photographic set-ups, where lighting, cameras, film, focussing, exposure, etc., have already been worked out, so that all the operator need do is to "aim" the equipment and "shoot." Photoflood, flash, reflector bulb, projection bulb and strobolite light sources will be discussed and demonstrated. Such problems as depth of field, types of background, speed of lenses, and mounting of equipment will be detailed with particular emphasis on the special demands of the dentist. Ample time will be left at the end of the session for the questions and problems of men attending the clinic.

FULL AND PARTIAL DENTURES

Reducing the Stresses Transmitted by the Partial Denture at their Origin—the Occlusal Table

OLIVER C. APPLEGATE ANN ARBOR, MICHIGAN

Presented on Monday and Tuesday at 1:30 and 3:30 p.m. in Room 522

The service expectancy of a partial denture is no greater than the stress control accomplished. The most effective stress control will always be made at its origin, the occlusal surfaces of the supplied teeth. Induced stress is not the worst during dental function, but during bruxism (night grinding). The adjustment of occlusion by "spot grinding" does not relieve the excentric occlusal contacts made in periods of bruxism. A practical method will be demonstrated for achieving occlusal harmony in the excentric, involuntary contacts as well as those occurring during voluntary functional contacts.

34. Practical "Plus" Factors in Denture Construction

KENNETH P. AUSTIN......CHICAGO

Presented on Monday at 10:30 a.m. in Room 361 Presented on Monday at 1:30 and 3:30 p.m. in Room 561

In this clinic the clinician will bring out the factors which cause dentures to fail and show how to avoid those pitfalls stressing the following steps: (1) Selection and management of patients as an aid to successful dentures; (2) Vertical—how it can easily be too great a cause of complete failure; (3) Some few points in esthetics; (4) Correction of occlusion; (5) How good is your laboratory? A few hints on how to check your laboratory.

35. Practical Answers for Denture Problems

Presented on Monday and Tuesday at 1:30 and 3:30 p.m. in Room 534

(1) Nutritional benefits for denture supporting tissues (stone casts and photos); (2) Impressions; (3) Model dentures and a set up on an articulator; (4) Flasking; (5) Tinting and shading of base with artist colors added to acrylic mix; (6) Molding the denture palate in soft wax with tongue pressures and movements during swallowing and speaking; (7) Balancing occlusion with spring center bearing; (8) Pouring models in Blanchard Vacuvester.

36. Occlusion from Rest Position

RALPH H. BOOS.......MINNEAPOLIS, MINNESOTA

Presented on Monday and Wednesday at 1:30 and 3:30 p.m. in Room 523

Treatment planning for adjusting occlusion or open bite restorations primarily involves a vertical, centric and rotation position of the mandible which will be maintained by the occlusion. In many cases the original normal bite has been lost due to malocclusion or loss of teeth without replacement. To restore the bite and regain normal efficiency the physiological rest relation is registered for the basic diagnosis. A short review of anatomy and physiology provides a study of many of the conditions of intermaxillary relation. The patient is carefully instructed and provided with a prescription exercise to register the rest position. From the rest position we may determine vertical and central relation. A simple method of mouth transfer is suggested. Various methods of treatment for practical cases will be shown, some involving temporomandibular pain cases.

37. Basic Principles of Full Denture Construction

Presented on Monday and Wednesday at 1:30 and 3:30 p.m. in Room 505

This procedure will deal with following basic principles: (1) Non-pressure impressions; (2) Registration of positive central; (3) Flexibility of the human condylar mechanism within limits prescribed by balanced articulation; (4) Establishing flat plane of occlusion parallel to a similar condyle path; (5) Orientation of this plane at correct distance from centers of rotation. A colored motion picture will show the entire procedure. This procedure is simple but most accurate. Chair time is conserved throughout and return visits are reduced to an absolute minimum. A table presentation will show the various steps in the procedure and the importance of mounting casts on articulator to centric will be stressed. A problem case will also be demonstrated.

38. An Immediate Denture Service

DENTURE RESEARCH GROUP OF CHICAGO

(Frank A. Farrell, C. A. Frankewicz, Boles G. Gobby, A. J. Kastel, W. E. Specter, Raymond C. VanDam)

Presented on Monday at 10:30 a.m. in Room 522 Presented on Wednesday at 1:30 and 3:30 p.m. in Room 522

This presentation is an integral part of the psychosomatic principles of denture practice. Two types of immediate dentures are available, depending on indications. The conventional or full labial type and flangeless anterior socketed type. The outstanding feature of either type is the avoidance of any surgery other than the removal of teeth. Alveolectomy of the anterior portion of either maxilla or mandible is unnecessary with this procedure. Visual aids and demonstrations of actual cases will be provided at each session.

39. Some Physical Characteristics and Clinical Applications of the Self-Curing Acrylic Denture Base Resins

WILLIAM L. MC CRACKEN.....ANN ARBOR, MICHIGAN

Presented on Monday and Tuesday at 10:30 a.m. in Room 549 Presented on Wednesday at 1:30 and 3:30 p.m. in Room 549

The use of the self-curing acrylic resins as denture base materials has been retarded by a lack of any proven advantage over heat-cured resins. In an attempt to better evaluate and compare their physical properties with conventional materials, the clinician has undertaken a study of several materials on the market today. In addition, a study of practical cases permits an impartial evaluation of their clinical use. The subject was approached from a physical standpoint, but the presentation will be illustrated by appropriate slides showing the characteristics of the materials with pictures and models of practical cases. A question and answer session should be of interest to the listener.

40. Lower Vitallium Denture Implantation

W. S. PAULLUS.....LEWISBURG, TENNESSEE

Presented on Tuesday and Wednesday at 1:30 and 3:30 p.m. in Room 521

The technic for lower vitallium denture implantation will be demonstrated. A movie of the surgical procedure involved in the actual implantation will be shown as well as a movie of the implantation of a vitallium posterior bridge abutment. Patients with implants in the mouth will be present for dental observation. Printed outline of technic and procedure will be issued to dentist.

41. Retention of Dentures

> Presented on Monday at 1:30 and 3:30 p.m. in Room 549 Presented on Tuesday at 10:30 a.m. in Room 521

The retention of dentures is effected by the action of the air pressure on the liquid film. Any alteration of this film by design of the denture base or otherwise will affect the retention of the denture. Results of experiments on the retention of dentures will be presented, as well as actual measurements of retention with different types of film, design, and denture material. The speaker will be assisted by Dr. Paul Chung, Assistant Professor of Prosthetic Dentistry, Northwestern University Dental School.

PRACTICE MANAGEMENT

42. Examination and Estimates

ARTHUR A. CAMPBELL......WALLA WALLA, WASHINGTON

Presented on Monday and Tuesday at 1:45 and 3:45 p.m. in Room 550A

A quick and simplified method of making examinations and estimates, understandable to the patient as well as the dentist. A correctly designed patient record and a correlated estimate sheet. Geared records and their value in restricting time lost in book and record keeping, by both the dentist and his assistant.

43. Dramatized Technic of Practice Management

J. C. A. HARDING......SAN DIEGO, CALIFORNIA

Presented on Tuesday at 10:30 a.m. in Room 548A Presented on Tuesday at 1:45 and 3:45 p.m. in Room 548A

An orderly and ethical method for the examination and classification of new patients, following them from initial request for appointment, through the diagnostic procedures, recommendations for treatments indicated, planning of payment method and appointment sequence, and finally establishment of a recall plan as preventive measure.

44. Normal Suggestion and Hypnosis in Dentistry

WILLIAM T. HERON......MINNEAPOLIS, MINNESOTA

Presented on Monday and Tuesday at 10:30 a.m. in Room 534 Presented on Tuesday at 1:45 and 3:45 p.m. in Room 509

Normal suggestion and suggestibility will be discussed and demonstrated using members of the group as subjects. Hypnosis as a condition of greater suggestibility will also be demonstrated and it will be shown that this state can be advantageously used in dentistry. It is particularly useful in relaxing the patient and alleviating the anxiety sometimes connected with dentistry. Auto-hypnosis will be discussed as a technic of relieving tension in both the dentist and his patient.

NEWS AND ANNOUNCEMENTS

(Continued from page 13)

representative areas of the country will serve on the faculty for the course. They

Dr. Balint Orban, director of the Colorado Springs (Colo.) Foundation, will present the place of gingivectomy in the treatment of periodontal disease. Dr. Orban is internationally known as an author, teacher, researcher, and a practicing specialist in periodontia.

Dr. Edward Ball, Cincinnati, Ohio, will teach prophylaxis. Dr. Ball is a past president of the American Academy of Periodontology, specializes in the clinical practice of periodontia, and is nationally known as a pioneer and authority in this field.

Dr. Raymond Johnson, who divides his time as a member of the Department of Periodontia at the University of Minnesota and in private practice limited to periodontia, will present the home care phase of the treatment of periodontal disease. Dr. Johnson also is a past president of the American Academy of Periodontology.

Dr. Arne Lauritzen, Seattle, Wash., will discuss the important phase of occlusion in the treatment of periodontal disease. Dr. Lauritzen, a prosthodontist and occlusodontist, has created such an unusual reputation with his work on occlusion that he was drafted to teach this phase of the subject as a most important adjunct in treating periodontal disease.

The newly-adopted policy for daytime postgraduate courses will be in effect for this course. If the enrollment is large enough, it will be presented by means

of closed circuit television.

The fee for the course is \$25. Reservations and further information may be secured by writing to the Postgraduate Division of the University of Illinois College of Dentistry, 808 S. Wood St., Chicago 12, Ill.

PRO-DENT SELECTION OF CHILDREN'S FORCEPS

An outstanding set highly endorsed by Pedodontists as the most efficient designs developed. Properly constructed for the extraction of all deciduous teeth. Furnished in our high grade Stainless Steel. Inquiries invited by mail or phone. See our complete line of quality surgical and operating instruments during the Chicago Midwinter Meeting. Booth No. 184.

BOND-A-MONTH CAMPAIGN

The American Dental Association is one of nine major professional associations in the United States which recently formed an Advisory Committee to the Treasury Department. Dr. Harold W. Oppice, of Chicago, immediate pastpresident, is the official representative of the A.D.A. on this committee.

At a recent meeting of this group in Washington, the costs of our greatly stepped up defense program and the consequent danger of uncontrolled inflation were dramatically demonstrated. Inflation is a danger very close to all residents of the nation. One of the most effective ways to curb this threat is to do everything in our power to increase the sale of Defense Bonds, particularly by spreading the Bond-A-Month habit of regular saving.

In the interests of this important defense effort, all members of the American Dental Association will receive a series of three letters urging participation in the Bond-A-Month plan. Any assistance you can give to the Defense Bond Committee in your state and community will be sincerely appreciated.

JOSEPH E. WILHELMI

Dr. Joseph E. Wilhelmi, whose death occurred on September 21st, was graduated from Marquette University Dental School in 1923, and had been a member of the Chicago Dental Society—West Suburban Branch—since 1936.

JOHN C. PURDIE

Dr. John C. Purdie died on July 26th. Rites were held in Mumford, N.Y. Dr. Purdie was graduated from the Chicago College of Dental Surgery in 1907, and practiced in Edgewater for over 50 years.

A VERY HAPPY NEW YEAR FROM

GRIEVANCE COMMITTEE ARBITRATES MANY CASES

(Continued from page 11)

societies, the Chicago Dental Society receives complaints only in writing. For a variety of reasons, chief of which is the value of accurate terminology, dates, amounts and names, receiving of complaints in writing is the only good procedure. Upon receipt of a complaint the member in the case is invited to present his history and opinions and the matter is turned over to the committee. The member is, of course, under no compulsion to act but the great majority of men are perfectly willing to do all they can to straighten out these unfortunate affairs. In a surprising number of cases the committee can arrange for a better understanding between the dentist and his patient and a good dentist-patient relationship is restored. But the moral of this tale is that if we had been a little more realistic and a little more explicit in the first place it would have avoided considerable wear and tear on the Grievance Committee and better public relations for the member involved.

One thing that the committee will not undertake to deal with is a complaint about fees. That is strictly between the dentist and his patient. But in all other cases the committee will do everything it can to help our members with their difficult patients.

APPLICANTS

(Continued from page 47)

BLAKE, CHARLES B. (Loyola 1919) North Suburban, 1159 Wilmette Ave., Wilmette. Endorsed by Paul B. Bass and Earl F. Christie.

HURST, ROY R. (U. of Ill. 1950) West Suburban, 524 Hillside, Glen Ellyn. Endorsed by Fred N. Bazola and Edward H. Ragan.
